FOR LICENSED FARMS AND GROWERS, ANYWHERE

Drying and extraction rooms, built in a container.

Built in our shop and shipped, built on your site, or the design to build yourself. Sized to your harvest and priced line by line before anything is ordered.

Three ways to buy

Built and shipped

Built and tested in our shop, shipped ready to set on a pad and connect.

Built on your site

Our crew builds it where it stands, with the pad, power and fence planned with the farm.

The design

Drawings, the equipment list, wiring and airflow, and a work order for your builder.

Drying container

- Insulated, with AC and a dehumidifier sized to the wet weight
- Racks or hang lines, airflow, wiring, panels and controls
- Lots move through on a schedule so harvest never waits for space
- Power and storage containers to match

Extraction container

- A cold ethanol line from wash to distillate
- Low-end, mid tier or primo pieces, with room to upgrade
- Laid out for your engineer and fire marshal to approve before it is built
- Equipment, labor and pounds a day planned before you buy

How it works

1

Tell us the harvest

Pounds a day, how you dry, what you extract, where the farm is.

2

We size and price it

Every piece, its labor and its date, in a quote you can check.

3

We build it

In our shop or on your site, checked off step by step with photos.

4

Set and running

Shipped or finished in place, tested and handed over with its drawings.
